

WEBSITE DESIGN & BUILD OVERVIEW

We design brands that matter and build products that last

youngtimbers.co.za rebuilt as a React application. The layout, typography, colour and copy of the original site are carried over unchanged; what is new is the motion, the wordmark, and a capabilities line that now runs as a ticker.

EST. 2019

SOUTH AFRICA / REMOTE

YOUNGTIMBERS.CO.ZA

One page, four jobs: say who the studio is, show what it sells, make the enquiry easy, and log it automatically.

The shape of the page

A single scroll, no sub-pages. Every section does one job and hands over to the next, so a first-time visitor reaches the enquiry form without a decision to make on the way.

The studio sells judgement, so the page is deliberately quiet: a lot of paper, one typeface, hairline rules instead of boxes, and no imagery competing with the work.

01 Header

Wordmark, three anchors and the two social accounts. Sticky, with a hairline progress indicator on its lower rule. Collapses to a Menu drawer below 900px.

02 Hero

The positioning statement, the one-paragraph explanation of what the studio is, founding year and location, and a single route onward to Services.

03 Capabilities

Six disciplines on one line. Now a continuous ticker, so the full range is read whatever the screen width instead of wrapping or being cut off.

04 Services

Four numbered offers as an accordion, open by default so the section reads as a list. Each row expands and collapses on click or keyboard.

05 Contact

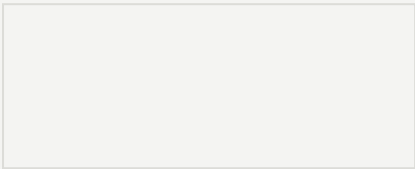

Direct details with a copy-to-clipboard control on the left, the enquiry form on the right. Below 600px the two become a swipeable pair.

06 Footer

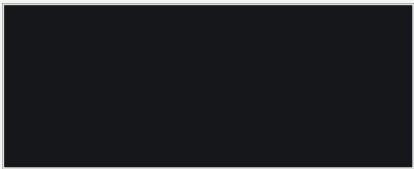

The only dark band on the page. Holds the mark and the current year, set live rather than hard-coded.

Unchanged from the original build. Six colours, one typeface, one measure.

SPACING

22 · 34 · 48 · 72px

COLUMNS

0.70fr / 1fr, stacking at 980px

RADIUS

2px, buttons only

RULES

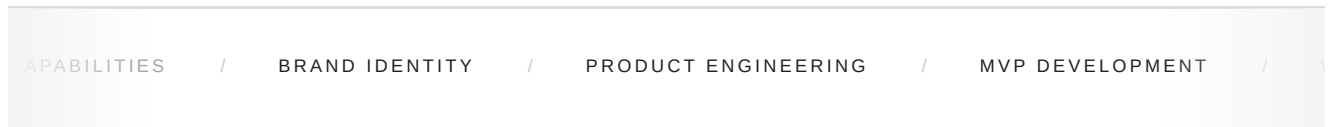

1px #dcdcd8, no shadows

TARGETS

44px minimum on touch

Motion was added where it answers something the visitor did, and once on arrival. Nothing was moved, resized or recoloured to make room for it.

THE CAPABILITIES LINE, BEFORE AND AFTER

Four identical groups sit on one track. The track travels exactly one group's width and loops, so the seam never shows. The row keeps its original height, rules and type; only the edges are new, masked so items arrive and leave softly. Pointing at the line pauses it and lifts the item under the cursor out of the rest.

On arrival

The headline sets word by word, 35ms apart, then the paragraph, the meta line and the button follow. One sequence, once, and then the page is still.

On scroll

Services and Contact settle 8px into place as they arrive. A hairline under the header tracks reading position across the page.

On action

Accordion rows open on a measured height. Buttons fill from the base. Nav links draw an underline. Copy confirms in place and reverts after two seconds.

Sending an enquiry

The button disables and the status line reads Sending. On success the fields are cleared and swapped for a confirmation that draws a check and names the sender; a single control brings the empty form back. On failure the status turns and offers the email address instead, with everything the visitor typed still in place.

Respecting the visitor

Every one of these has a reduced-motion path. With the system preference set, the ticker becomes a scrollable row, entrances resolve immediately, the progress hairline is removed and smooth scrolling is switched off. Keyboard focus stays visible throughout and the accordion follows the WAI-ARIA pattern.

An enquiry travels from the form to a Google Sheet without a server in between.

REQUEST

METHOD	POST
MODE	no-cors
CONTENT TYPE	text/plain; charset=utf-8
TIMEOUT	15000ms, AbortController
ENDPOINT	script.google.com/macros/s/AKfycbx4SdMZrXXj8AFwI-P0mBUikaPKY_ZQpZJCjoeb77cDtponCTpgTIg4Klj30Nh3VSU2/exec

PAYLOAD

NAME	Full name, two characters or more
EMAIL	Address, shape-checked before sending
PROJECTTYPE	One of five service slugs
MESSAGE	10 to 600 characters, counted live

The form also carries a native action and method, so an enquiry still reaches the same endpoint if JavaScript never runs.

Vite and React in front, Netlify behind. Three commands from clone to live.

Stack

BUNDLER	Vite 5
UI	React 18
MOTION	Framer Motion 11
STYLING	Tailwind 3 + project CSS
HOST	Netlify, SPA redirect

Commands

INSTALL	npm install
DEVELOP	npm run dev
BUILD	npm run build
CHECK	npm run preview

```

Everything in `public/` is copied to the site root at build time, so the wordmark resolves at `/young-timbers-logo.png` in development and in production alike. `docs/preview.html` is a single self-contained file: the stylesheet is inlined and the wordmark embedded, so the site can be opened or sent on without a build step.

The same page at 1440 and at 390.

DESKTOP, 1440PX

MOBILE, 390PX

Below 980px the two-column sections stack. Below 900px the navigation becomes a drawer and the capabilities ticker speeds up. Below 600px the contact panels become a swipeable pair with the track height interpolated across the gesture, so the taller panel is never clipped mid-swipe.
